

CHESTNUT FENCING PRICE LIST

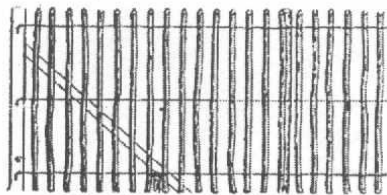

The manufacture of the "Homewood" Cleft Chestnut Fencing can justly be described as a rural industry, as it provides work in the woodlands of Hampshire, Surrey and Sussex. Only stout pales are used and they are carefully cleft, by hand, from locally grown sweet chestnut and are well seasoned before being bound up in the wire.

Each line of wire is made up of 4 pieces or strands of 2mm wire. The wire is tightly twisted round the pales and each pale is fastened to one row with a small staple. The fencing is dispatched to customers in rolls, normally 10 yard lengths, but can be made to whatever length is needed by you.

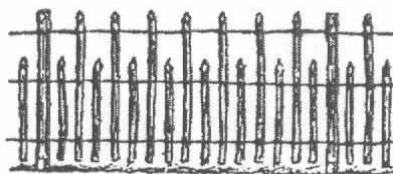

The "Homewood" Cleft Chestnut Fencing is ideal for many uses eg for boundaries, windbreaks, screening and where a hedge is being planted. For fencing 4ft 6 or higher, we recommend the styles with three lines of wire. If you need a fence which is difficult to climb, the pales should be not more than 2 inches apart, otherwise a footing will be afforded on the middle row of wire. Please note the pales are spaced as near as possible to the dimensions given but this is a natural product, the pales are not uniform and spacing will vary.

Chestnut posts

Posts are round, or cleft (half round or quarter section) & measure 2" to 3" in diameter, or equal according to section. They are peeled & pointed ready for driving. All posts should be at least 18" longer than the height of the fence but 2 foot longer is recommended for fencing 4'6" & over. We suggest posts are driven every two yards & that you use struts at the beginning, corners, end & every 50 metres. In some cases, you may need larger posts (round strainers) at the beginning & end - prices available on request.
